

PROBLEM-SOLUTION FIT CANVAS

Date: 29 September 2026 | Team ID: SWTID-2026-7446

Project Name: ComicCraft – AI Comic Story Creator using Gemini Models

1. CUSTOMER SEGMENT(S) [CS]

Non-artists, storytellers and hobbyists who want to create personalized comics from simple prompts. The application is designed to make comic creation accessible to casual users without requiring technical expertise.

2. PROBLEMS / PAINS + ITS FREQUENCY [PR]

Creating a complete comic traditionally requires story planning, dialogue writing, illustration and layout/export work. ComicCraft addresses these repeated creation tasks in one workflow, generating a panel-by-panel story, images and a downloadable PDF.

3. TRIGGERS TO ACT [TR]

A user has a comic idea/prompt and wants to turn it into a complete comic. Other triggers include wanting to change the tone or art style, preview the result, or download/share the finished comic.

4. EMOTIONS BEFORE / AFTER [EM]

Before: users may face the effort and complexity of creating storylines, dialogues, illustrations and layouts manually. After: the system provides a personalized, visually engaging comic that can be reviewed and exported as a PDF.

5. AVAILABLE SOLUTIONS – PROS & CONS [AS]

Available project components/approaches include manual comic creation and AI-assisted generation. ComicCraft combines Gemini Flash for structured outlines, Gemini Pro for narration/dialogue, and Stable Diffusion for illustrations. Pros: automated end-to-end generation, customization, preview and PDF export. Limitation stated in the project: the current version focuses on single comic generation without user account management.

6. CUSTOMER LIMITATIONS [CL]

The target audience may not have artistic or technical expertise. ComicCraft therefore uses an interactive web interface and automated generation. The project also requires a suitable software environment and AI dependencies such as FastAPI, Gemini API, Diffusers/Stable Diffusion and Python packages.

7. BEHAVIOR + ITS INTENSITY [BE]

Users enter a story prompt, character name, setting, tone and art style; submit the form; review comic panels; iterate by changing preferences if needed; and download the final comic. The workflow supports repeated customization until the output matches the user's creative vision.

8. CHANNELS OF BEHAVIOR [CH]

ONLINE: Web interface built with HTML, CSS and Jinja2, backed by FastAPI; API endpoints are also provided for direct JSON-based comic generation. OFFLINE: The generated comic can be downloaded as a PDF for saving, printing or sharing.

9. PROBLEM ROOT / CAUSE [RC]

Comic creation combines multiple skills and stages: story outlining, narration/dialogue, visual illustration, panel organization and final document export. The project addresses this fragmented workflow by

10. YOUR SOLUTION [SL]

integrating these stages into one AI-powered application.

ComicCraft is a web-based AI comic creator. It accepts user preferences, uses Gemini Flash to generate a structured 5-panel outline, Gemini Pro to create detailed narration/dialogue, Stable Diffusion to create comic-style illustrations, then builds the layout and exports the complete comic as a PDF.
